IM-5006

PRODUCT

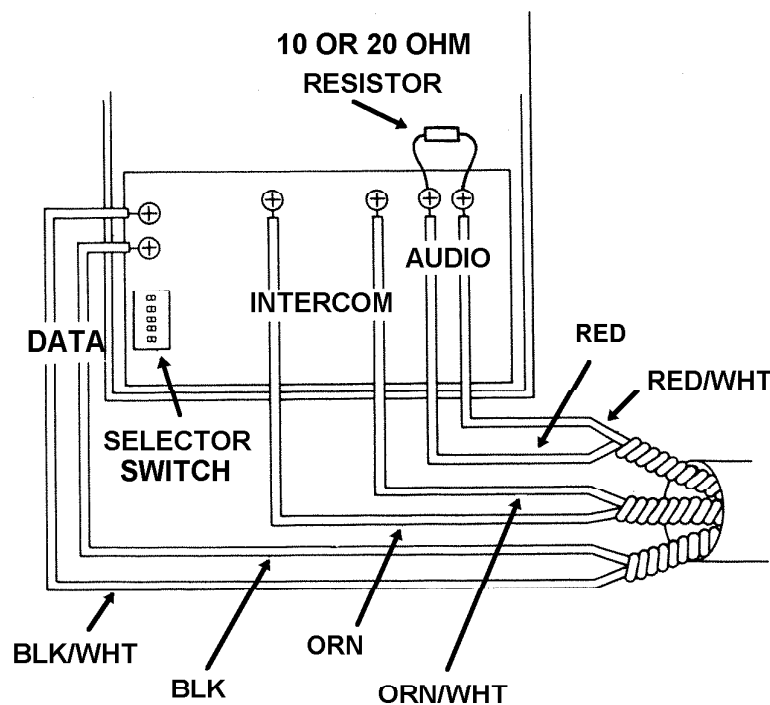

HIGH REMOTE SPEAKER VOLUME

SUBJECT

PURPOSE: In some instances, where only 4 - 8 remote speakers are used with a system (as opposed to being fully loaded) the radio volume at the remote speaker locations may be too loud; even at the lowest setting.

SOLUTION: Since the IM-5006 uses the "system resistance" as part of the volume control, it may be necessary to add a 10 ohm, 1/4 watt or 20 ohm, 1/4 watt resistor across the red and red/white pair.

For convenience sake, it is recommended that the resistor be placed at a remote station, rather than at the master.

This problem has been corrected on the IM-5000.
